B&O to X-10 CONVERTER™

Use your B&O remote control to dim lights and remotely switch equipment.

Ideal for your home cinema: the right setting for your lighting with one press of a button.

MARMITEK®

IR455 B&O to X-10 Converter

IR455 B&O TO X-10 CONVERTER

The "B&O to X-10 converter" is your key to the house of the future. You can now control all your lighting and equipment with your own BEO4 remote control. You can even change the mood in the entire house by pressing only one button (e.g. for watching TV, reading, having diner or the night setting).

- No need for extra remote controls on the table: control your TV, audio equipment, lighting and blinds with your BEO4 remote control.
- Beautiful compact casing. Table model.
- Unlimited possibilities as a result of the X-10 world standard.

HOW DOES IT WORK?

You aim the BEO4 infrared remote control at the 'B&O to X-10 converter'. The XM10 power line modem (available separately) transmits your command to your lights and equipment via the mains. No extra wiring necessary.

Equip all lamps and appliances which you wish to control remotely with a Marmitek X-10 module. This module makes sure the device or light can be dimmed or switched on and off.

Marmitek X-10 modules are available in several versions. There are Marmitek MicroModules, which can be hidden away behind existing switching and wall sockets. More information can be found on our website.

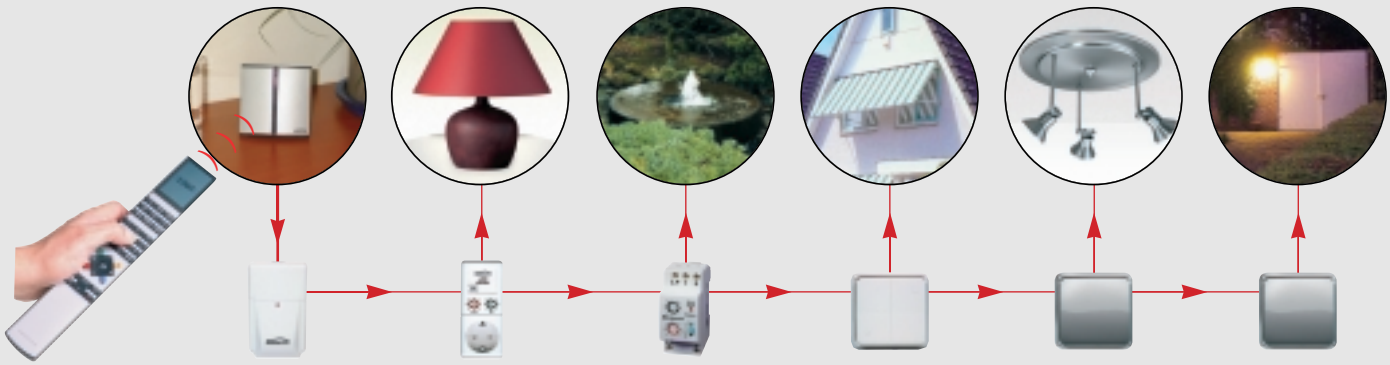
POSSIBILITIES

The possibilities of Marmitek X-10 are endless. Almost any device that is powered by electricity can be controlled with the BEO4 remote control.



XM10 MARMITEK X-10 modules.
